

Product Data Sheet

Finish Conditioner & Polish

VOC compliant

Features: A premium machine polish product for the technician that demands high performance. Not just a “fill & glaze”, **Finish Conditioner & Polish** removes the imperfections!

Benefits: **Finish Conditioner & Polish** removes fine scratches, light oxidation and swirl marks without wax, nothing is hidden, the condition is corrected!

Uses: Light duty cleaning, polishing and removal of imperfections on base coat / clear coat paints.

Directions: Use with a high-speed buffer at 1,200 rpm to 1750 rpm. Best performance when used with a VG-810-G or VG-500-G foam pad.

Tips: NEVER buff clear coat paint systems above 1750 rpm. Excessive buffer speed will generate heat that will drive scratches and other imperfections deeper into the clear coat. For best professional results follow with **ValuGard One Step Polish & Sealant** or **ValuGard Carnuba Cream Wax** for paint protection and gloss enhancement.

Sizes: VG-J118 = 12 pints per case

VG-J118G= 4 gallons case
